

Skin Closure Device

Accidents Happen **BE PREPARED**

The Product Trusted and Preferred by Medical Professionals
Is Now Available for Personal Use

Simple to Apply as a Bandage, Strong as a Suture

Did you know that there is an alternative way to safely close wounds other than going to the doctor to get stitches? With the development of microMend®, you can now effectively treat cuts and lacerations wherever you are and eliminate a stressful and costly trip to the ER or urgent care facility.

Designed like a butterfly bandage, microMend can be applied easily and painlessly in seconds. The device has been demonstrated to be gentle enough to use on children and the fragile skin of the elderly, and effective in closing skin tears.

Next time you or a loved one gets a cut, have microMend on hand and be prepared to close the wound on the spot, whenever and wherever the accident occurs.

WHAT IS MICROMEND?

microMend has raised the bar for effective wound closure devices. The innovative design combines the holding strength of stitches with the simplicity of applying a bandage.

The microMend Skin Closure Device has been widely used by medical professionals in hospitals and clinics since its development in 2019.

The “over-the-counter” products are similar to microMend for physician use and now available in convenient packaging for personal use.

microMend is simple and intuitive to apply and remove.

microMend is great for

- Home Chefs and Cooking Enthusiasts
- Traveling and Abroad
- Accidents in the Home
- Youth Sports & Athletics
- Camping & Outdoors Activities
- Do-It-Yourselfers
- School Nurses & Coaches
- Gym & Extreme Sports

- Vehicle & Boat
- Any First Aid & Emergency Kit

microMend®

PRODUCT HIGHLIGHTS

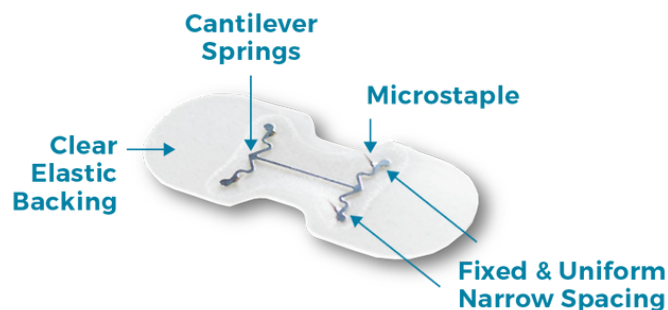

- Painless and Easy to Apply
- Holding Strength of Stitches As It Does Not Just Rely on a Weak Adhesive Bandage
- Excellent Cosmetic Results
- Painless and Easy to Remove
- Cost and Time Savings Compared to ER Visit
- Easy Visualization of Wound Healing
- Medically Proven Technology
- Convenient to Bring Anywhere

Patented Technology

The high tech Microstaples provide multiple points of contact to attach microMend to the skin enabling secure wound closure of lacerations and other wounds that previously required sutures and staples.

The Microstaples are tiny and only enter the upper skin layer making them painless. microMend is as easy to apply as a bandage and thus a time saving and easy-to-use option for closing lacerations and skin tears. It keeps wounds securely closed for up to a week allowing them to heal with minimal to no scarring.

microMend is a patented Class 1 510(k) Exempt Medical Device listed with the FDA and manufactured right here in the USA.

STOCK UP BEFORE YOU NEED TO BE STITCHED UP

When you are far from home, do not let a bad cut sideline your day.

Add microMend to your vehicle, suitcase or backpack and be prepared to treat your wound and start healing while on the go.

The all-in-one microMend KIT contains everything you need to close a laceration, or add a Combo Pack of different microMend sizes to your existing first aid or emergency kit.

WHAT CUSTOMERS SAY

Top Rated on Amazon with 1000+ Reviews

"I bought microMend to keep on hand in my first aid kit. I do a lot of handyman work and accidentally cut myself sometimes. Having a simple to use wound closure bandage can save me a trip to the doctor or ER. Well made and packaged product. I did some research on wound closures and found the microMend closure to be one of the most recommended products by some of the medical professionals."

- Ken Z.

"I am a physician, and this is a great product! Rather than stitches, this is the best product out there! Works better, faster, cheaper and with less pain. My two boys play hard, but with this product, I know I can get them to heal the worst cuts that would otherwise require stitches. There is also no doubt I will be using this product on our outdoor hiking adventures."

- "Dr. Mom"

FACTS

12 million lacerations are treated in ERs and Urgent Care Clinics every year in the United States.

Millions more are inadequately treated at home.

Product Comparision - Why Choose microMend

microMend outperforms traditional wound closure products which rely on adhesives alone to close wounds and have little holding strength. The chart below shows a comparison of microMend to other wound closure products.

CHARACTERISTIC	Convenience / Ease of Use	Improved Cosmesis	Strength of Wound Closure	Stays on Skin	Wound Security
microMend®	●	●	●	●	●
Butterfly Bandage	●	●	●	●	●
Liquid Bandage	●	●	●	●	●
Medical Tape	●	●	●	●	●

CONSUMER PRODUCTS

microMend is available in several convenient options including an Emergency Laceration **All-In-One Kit** with everything needed to close a single wound; an Emergency Laceration Closures **Multi-Pack** with six microMend devices for multiple wound closures; and an Emergency Laceration Closures **Combo-Pack** that contains the two most popular sizes, microMend Extra Small (XS) and microMend Small (SM).
